The Creation of Tyga

Meet Joe.

Joe formed a company that launched Angry Birds to the world.

He took on the giants of Silicon Valley and won BIG.

But he had a problem...

2009

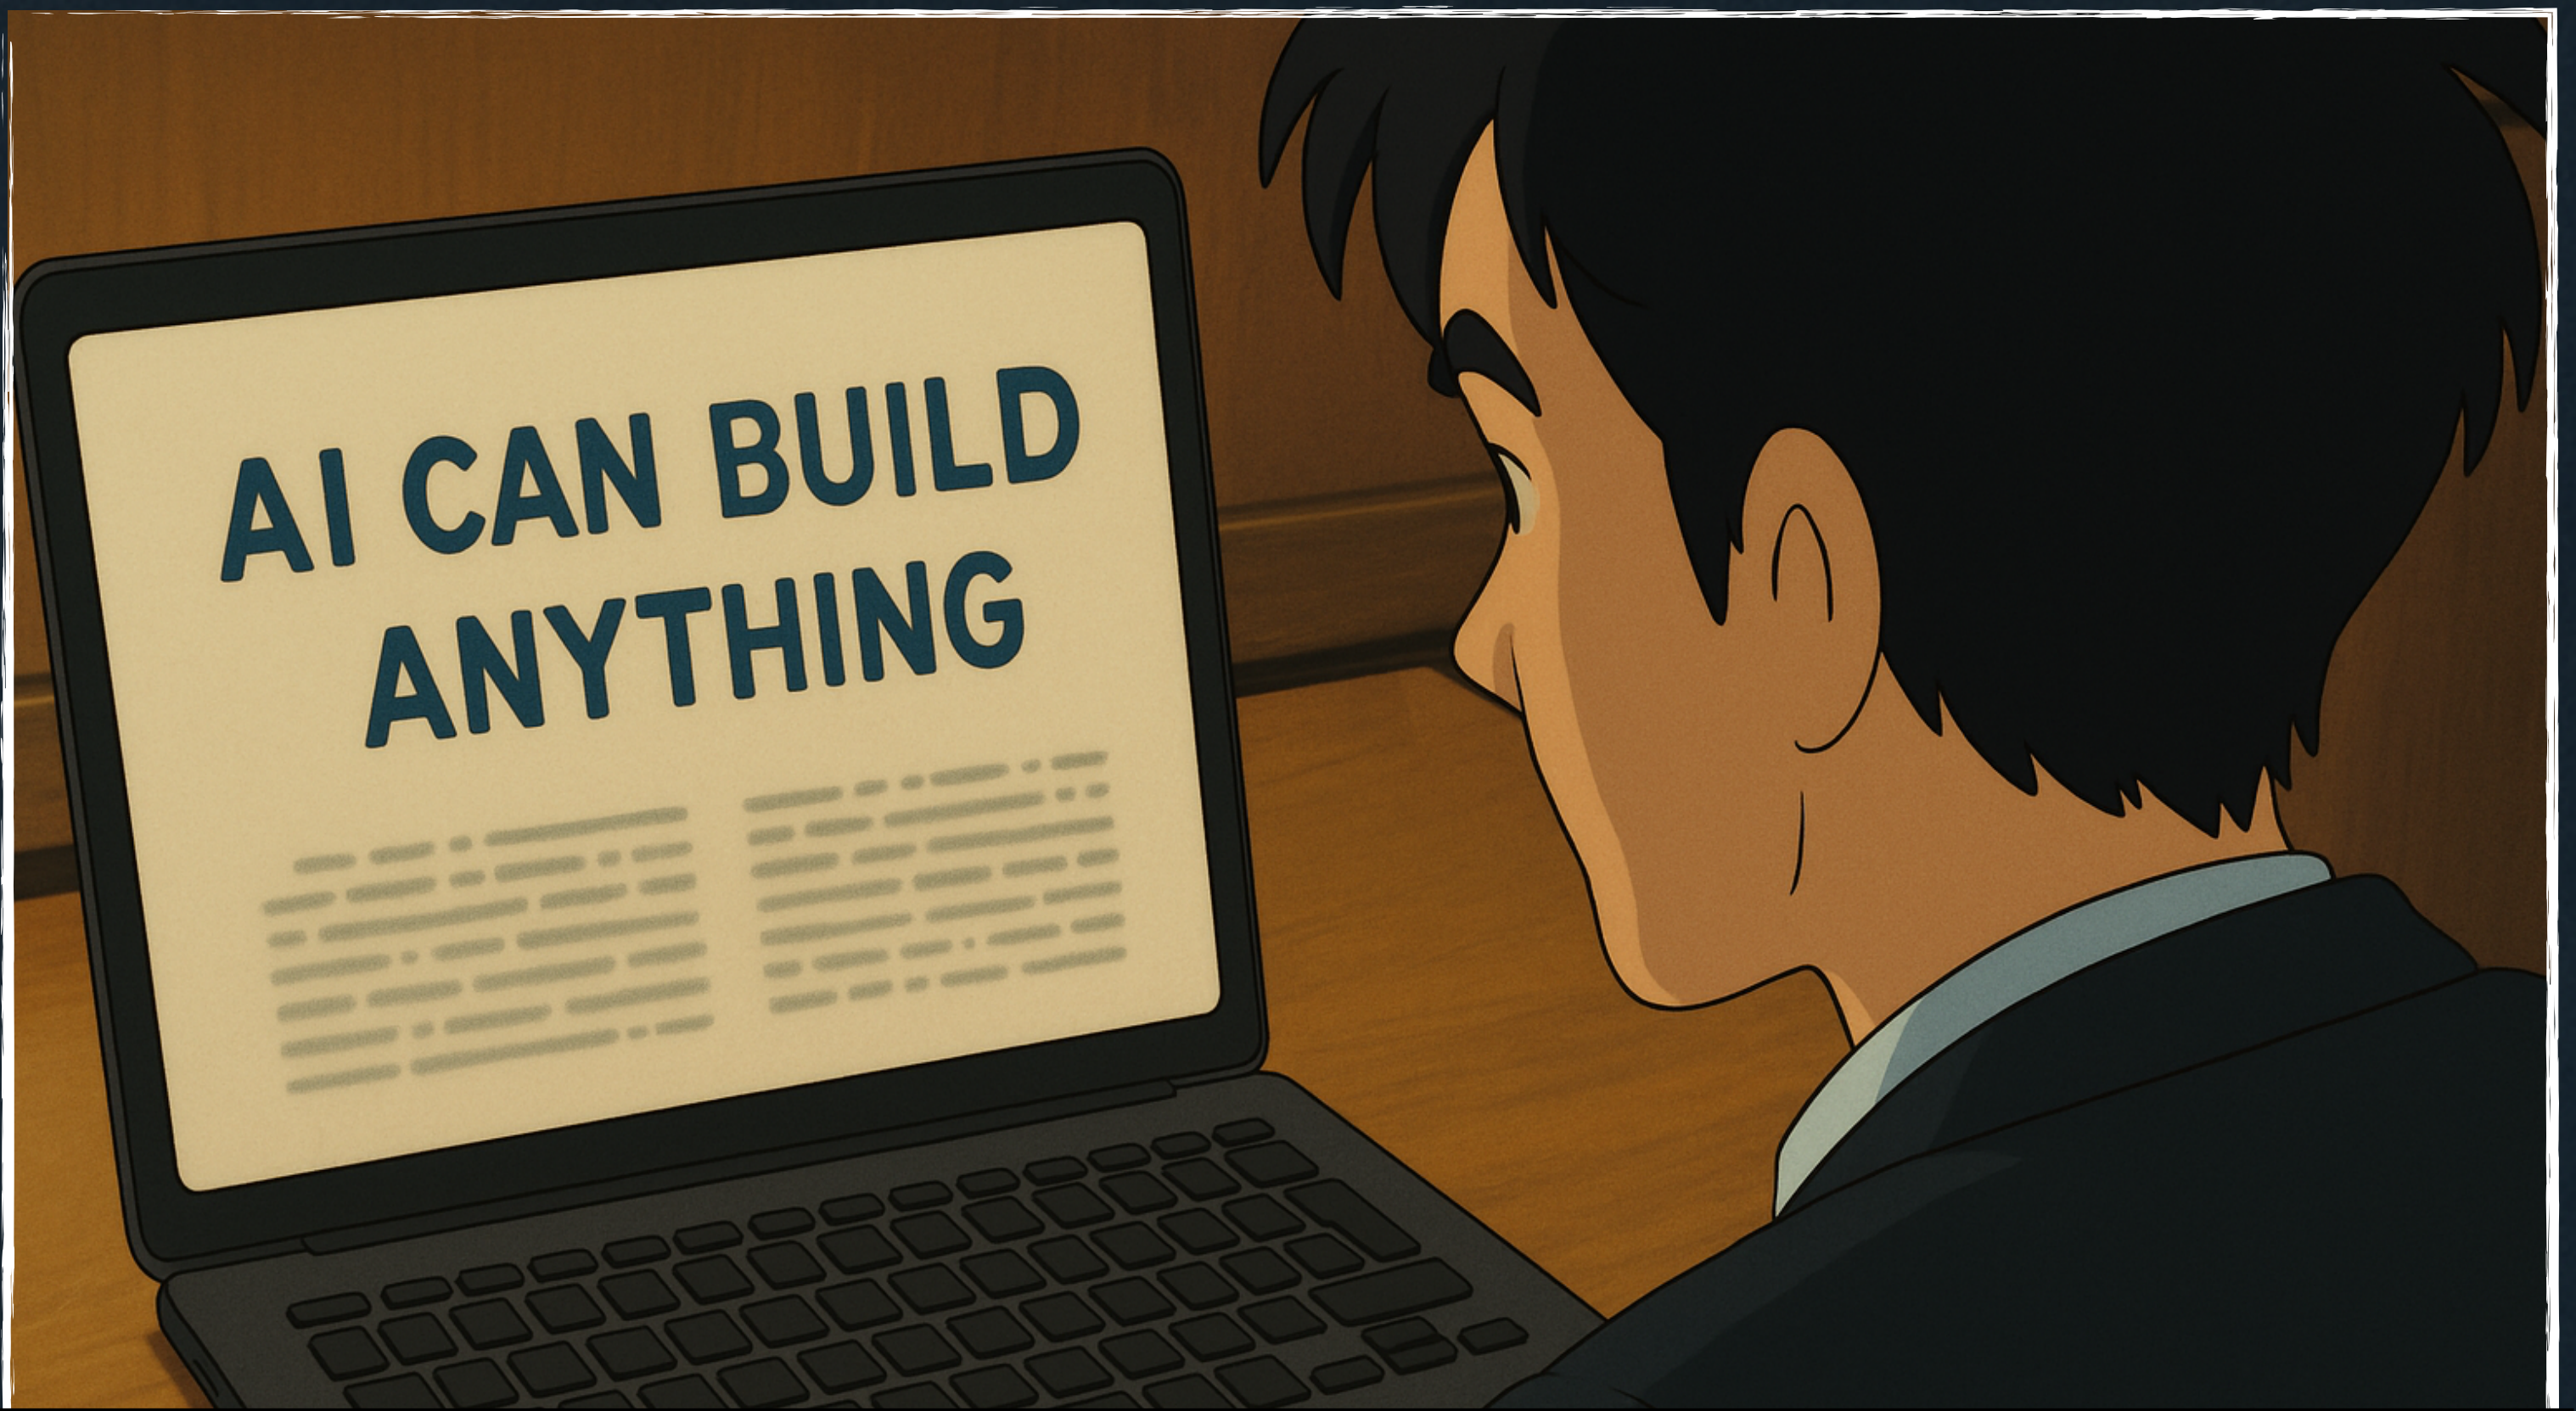

2023

You see, Joe is a disrupter. He likes having a mission and a purpose. A fighter without somebody to fight? Well, that left him feeling empty. He was waiting for his next opponent. His next goal. His next big thing....

TYGA.AGENCY

Finally, he found what he was looking for. With AI, he knew the world was about to change forever. The great next shift. He learned about software that could build brand new sites and apps in minutes.

But when he used those apps he was disappointed. They were very basic, didn't work the way he wanted them to, and they cost a fortune. He was convinced there had to be a better way, but after looking he realised there wasn't.

And that's exactly what he did. For nearly 18 months he worked like a mad man. Long nights, manic bursts... this was training for the fight. He put his sweat and blood into it, but he knew exactly what was needed.

Eventually, he did it. From this point he knew... nothing would be the same again.

An AI-native system that could create
AnYthing from the ground up?
This was more than using AI to write
code. It was more than basic templates.
There would be no limitations.
This was *LIMITLESS*.

Secret sauce? This was the entire
factory making all the sauce.

Companies can now see SaaS built in
weeks. They can take their idea and
turn it into an MVP in *RECORD* Time!

I have goosebumps!

2025 - Tyga was born...

The future of software
isn't code...
IT'S CREATION!
